**(54) SYSTEM COOKING
ARRANGEMENT**

(57) Abstract:

PURPOSE: To improve appearance and ease of use by considering factors in a kitchen or dining room space such as design, handling and others so that a plurality of cooking apparatuses in combination are housed in a cabinet space and the cabinet is located by considering its position relative to other furniture including a sink, tables, and others.

CONSTITUTION: A plurality of cooking apparatuses 1 are

modularized and each apparatus is made to a uniform dimension or to its integer multiples. The element of the module may not be an apparatus but a holding box 1a of an identical dimension. A cabinet 4 for the cooking apparatuses has a plurality of modular spaces 3 for freely fitting or taking out the cooking apparatuses 1 or holding boxes 1a. The cabinet has also power source outlets for the cooking apparatuses and steam processing devices, etc., although the detailed structure is not shown in the figures. The cabinet 2 is placed while considering its design characteristic, ease of use, ease of stowing, or forms of usage in the kitchen or dining room relative to other furniture including the sink, table, and others.
